# DAHLIA COLLECTIONS ATTRACTIVELY BOXED

## CULTURE

Dahlias are at their best during the latter part of September or early in October. To get exhibition blooms, disbud plants up to August 1. Spade or plow the soil 1 foot deep; fertilize with pulverized sheep or cow manure, scatter about ¼ pound of bonemeal around each hill when planting. If soil is very heavy, incorporate a liberal quantity of granulated peat moss. About August 1, apply about ½ pound of high grade fertilizer to each plant and work in thoroughly.

## CLOVERS, PASTURE MIXTURES, MISCELLANEOUS FARM SEEDS

Prices on all Field Seeds are subject to fluctuations. We will be glad to quote you firm prices on request. Orders entrusted to us will be filled at the lowest price of the day received.

### RE-CLEANED CLOVERS

Clovers weigh 60 pounds per bushel

**Alfalfa or Lucerne** (*Medicago sativa*). Northwestern-grown seed. Sow during April and May, August and September, 25 pounds per acre, preferably with no other crop.

**Alfalfa, Grimm.** An extremely hardy variety, less apt to winter-kill than older sorts. A heavy yielder and of deep-rooting habit. It requires about 15 to 20 pounds to properly seed an acre.

**Alsike, or Swedish Clover** (*Trifolium hybridum*). One of the hardiest and most tolerant of adverse soil conditions. Grows from 1 to 2 feet high. Sow early in the spring or early autumn, mixed with timothy, or 10 pounds per acre if alone.

**Crimson Clover** (*Trifolium incarnatum*). Used principally for soiling or green manuring. It is not hardy for more than one season. Height 1 to 2 feet. Sow any time from June to October, 20 pounds to the acre.

**Mammoth, or Sapling Red Clover** (*Trifolium pratense perenne*). This differs from the Medium, being of a ranker growth. Sow early in spring or in July and August using 6 pounds per acre.

**Medium Red Clover** (*Trifolium pratense*). Excellent for hay purposes, usually yielding two crops each year. Sow early in the spring or in late summer—July and August. 6 pounds per acre.

**Lespedeza Sericea—Perennial.** Adapted to any type of soil, wonderfully resistant to drought, large yielding hay crops, good pasture, and a fine soil improver. Like alfalfa, it requires one year to get set, but after the first year it will produce two to four tons of field cured hay per acre annually. Actual feeding trials have proved that Lespedeza Sericea hay is equal to that of alfalfa. Hulled seed sow 20 pounds per acre. **Lb. 45c; 10 lbs. \$4.00.**

**Lespedeza. Japan Clover.** A substitute for alfalfa on poor land. Sow in spring, after frost, at the rate of 25 to 35 pounds per acre. Weighs 25 pounds per bushel. **Lb. 20c.**

**White Blossom Sweet or Bokhara Clover** (*Melilotus alba*). Used either as a feed-crop or as green manure, to plow under. Grows from 3 to 5 feet high and thrives on almost any kind of soil. Sow 15 pounds per acre during spring and fall.

**Landino Clover.** The Wonder Pasture Clover. It is known as the giant white clover—a perennial lasting from four to eight years. It is not a particularly deep rooted plant, making its best growth where there is a fairly constant, but not excessive moisture supply in the surface and subsurface soil. As is the case with all clovers, largest growth is obtained on fertile and deep soils that are well supplied with lime, phosphate, humus and moisture. Seed 3 to 4 pounds per acre. **Lb. \$2.75; 10 lbs. \$27.00.**

**White Dutch Clover** (*Trifolium repens*). For Lawns and Pasture. Choice re-cleaned seed. Sow 5 lbs. per acre.  $\frac{1}{4}$  lb. 35c;  $\frac{1}{2}$  lb. 70c; \$1.25 per lb.; 5 lbs. \$6.00.

### VETCH, WINTER

**Sand, Winter, or Hairy Vetch** (*Vicia villosa*). Thrives on poor arid, sandy soils. It may be sown either in fall or in spring, mixed with rye, for a support. Grows 3 to 4 feet high and can be cut as soon as the bloom appears and again for the seed. Perfectly hardy. Sow 50 pounds to the acre.

### MILLET, GOLDEN

Can be sown as late as July 15th and yields a tremendous crop. **Lb. 15c; Pk., \$1.50; bu. \$5.50.**

### OATS

**Swedish Type White and Fulghum.** Sow  $1\frac{1}{2}$  to  $2\frac{1}{2}$  bus. per acre. Price on application.

### ORCHARD GRASS

(*Dactylis glomerata*). For early pasturing this is very desirable; also fine for sowing in shaded places. **Lb. 35c; 10 lbs. \$3.00.**

### RAPE

**Dwarf Essex.** This can be pastured 8 weeks after sowing. It must be sown in succession, as the stock eats it close to the ground and it will not stand pasturing any great length of time. Sow 6 pounds per acre broadcast, from April 1 to October 1. **Lb. 25c; 10 lbs. \$2.25**  
**Seed Rye and Wheat Prices** on application.

### SUDAN GRASS

An annual, and must be sown each year. Will yield from 2 to 4 tons per acre. Sow in drills, or broadcast, 16 to 24 pounds per acre. Several cuttings can be made from a sowing in one season. Thrives well in a season of drought. 35 pounds per bushel. **Lb. 20c; 100 Lbs. \$15.00.**

### PERMANENT PASTURE MIXTURES

For Upland or Lowland

Please state whether you want a mixture for upland or low ground. Use 40 to 60 lbs. per acre. **Per lb. 50c; 25 lbs. \$11.25; 100 lbs. \$40.00.**

### MISCELLANEOUS GRASSES

**Alta Fescue.** An improved strain of tall fescue, and is closely related to Meadow Fescue, but is longer lived and a better forage producer. Alta Fescue has been used to excellent advantage in the Eastern and Southern States, having a wider adaptation than many other grasses. Sow 15 to 20 lbs. per acre alone, or in mixture with other plants about 5 lbs. per acre. **Lb. 70c; 10 Lbs. \$6.50.**

**Blue Grass, Kentucky, Fancy Recleaned** (*Poa pratensis*). Rated as one of the best permanent grasses, especially useful for lawns and meadows. **Lb. 85c; 10 lbs. \$8.25.**

**Creeping Bent Grass** (*Agrostis stolonifera*). An excellent variety for lawns, succeeding well in moist situations and producing a dwarf, velvety growth. **Lb. \$1.25.**

**Fescue, Red or Creeping** (*Festuca rubra*). An excellent bottom grass, forming a close and lasting turf. It resists extreme drought and thrives on very inferior soils. **Lb. 85c; 10 lbs. \$8.25.**

**Red-Top, Fancy Recleaned.** This grade of seed is entirely free from chaff. For pasture, sow 15 pounds; for lawns, 25 pounds per acre. **Lb. 85c; 10 lbs. \$8.25.**

**Rye Grass, English Perennial.** (*Lolium perenne*). A nutritious permanent grass for meadows and pastures, or for mixing with other grasses for lawns. **Lb. 35c; 10 lbs. \$3.00.**

**Rye Grass, Domestic.** A valuable grass when quick results are required. **Lb. 25c; 10 lbs. \$2.25.**

**Timothy** (*Phleum pratense*). A grass of high value for hay and pastures. **Lb. 30c; 10 lbs. \$2.75.**

Cover with 4 inches of soil, and cultivate frequently after the plants are up. Plant late crop July 1st to August 1st. Eight to 10 bushels will plant an acre.

## THE COMMANDER

**Moto-Mowers—Wheel Type. Wheels Rearward and  
Within Cutting Width**

The Commander, although a wheel type of mower, combines the desirable features of a roller mower due to the traction wheels being rearward of, but within the cutting width of the reel.

The Commander over-all width is exceedingly narrow when compared to its cutting width, the mower being but 35 in. wide although equipped with a 30" reel. It is possible to cut much closer to an object than with the usual type of wheel mower, and to extend the cutting unit over the edge of the lawn when trimming along driveways or raised borders.

Likewise the over-all width of the Commander Triplex which has a 71 inch cutting width is but 75 inches.

Power Driven Cutting Units have no wheels or casters — they contact the ground on rollers to the rear of the reel and may be extended over the edge of the lawn when trimming. Will cut 12 to 15 acres per day.

The reel is readily removable and is equipped with a safety clutch. Briggs & Stratton Motor—3 actual h.p. at 2250 R.P.M. 4 cycle, air-cooled; bore 2½"; stroke 2½". ## No. 19 PLANET JR. GARDEN PLOW AND CULTIVATOR

Weight, 21 pounds.

Equipment:

- 1 2-inch cultivating tooth.
- 1 10-inch sweep.
- 1 plow.

No. 19—This attractive implement is especially designed for the farmer's garden work, though it offers to every one with either field or garden a cheap and effective tool for wheel-hoe operations. The hoes exchange sides to work to or from the row, and change of wheel regulates the depth. The hoes are constantly useful throughout the season. The cultivating teeth are oil-tempered and work admirably, are changeable for pitch and are useful for marking out rows. **Price \$11.95.**

No. 16—The same as above except in equipment, which includes one pair 6-inch hoes. Three cultivator teeth. One large garden plow. One 7-inch rake. One 4-inch rake. One leaf guard. **Price \$13.65.**

No. 220 PLANET JR. FERTILIZER  
 DISTRIBUTOR

The No. 220 will distribute fertilizer in the middles of three rows 12 to 14 inches apart; it will side-dress one side each of two rows up to 36 inches apart. You can use it in very narrow rows—as close as 9 inches. It spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel. Will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Price \$41.75.

PLANET JR. No. 4 COMBINED SEED DRILL  
 SINGLE-WHEEL HOE, CULTIVATOR  
 AND PLOW

The hopper holds 2½ quarts of seed, which can be sown in continuous rows or dropped in hills at 4, 6, 8, 12 or 24 inches apart. Capacity of hopper, 2½ quarts. The drill is detached and the tool frame substituted by removing but one bolt.

 AND CULTIVATOR

Capacity  
 of Hopper  
 90 to 100 lbs.

No. 230  
 Price \$59.95

Side Dress and Cultivate in One Operation

# Smalley HATCHET HAMMER MILL

CHOPPER GRINDER

"Successor to the Hammer Mill"

BLOWER RECUTTER

Grinds Faster than an Ordinary Hammer Mill—Cuts Power in Half

Paying livestock and poultry are the best feed factories in the world. Market your crop on the hoof with the HATCHET Hammer Mill as your right-hand helper. The HATCHET Hammer Mill makes your feed go as much as 35 percent farther!

Coarse, stalky roughage discourages livestock's appetite. Up to 35 PERCENT is nosed out of the feed box, trampled into mud or manure. Unground grain goes through undigested, lost forever or left second-hand for hogs. Adjust the HATCHET Hammer Mill coarse or fine

to fit the feed, and the ration for which it is intended. From the finest mash to trench silage, HATCHET Hammer Mill-processed feed brings more dollars rolling in!

You will blink your eyes in wonder when you first see the PNEUMATIC FEED work. The Hatchet Mill is the only silo filler of its kind with Pneumatic Feed. As the bundle reaches the knives, it is drawn in automatically by suction. No rollers, no gears, no belts, no chains . . . no dangerous hand feeding. Relax . . . put your mind at ease with the Smalley!

## NEW CYCLONE ATTACHMENT

### Traps Choking Dust—for Grain and Ground Feed

Breathe fresh, dust-free air when you equip your blower with this extra cyclone attachment. Works with any blower. Puts grain in the bin cleaner and brighter. Good fire insurance too—guards against dust explosions.

Note: The height of the blower when including the lower section of blower pipe is 5 feet.

Here's a faster, easier way to handle silage, grain, chopped hay, straw and fodder.

Smalley Auger Blower elevates feed and roughage 60 feet and higher. An ideal unit to use with any forage harvester. Makes silo filling a small-crew job.

An entirely new principle of blower design combines a six-blade ball-bearing mounted blower fan with positive feed auger. Special revolving tines are an exclusive anti-clog feature. So perfectly balanced—a six ounce pull turns the fan.

**Wide 39 in. x 48 in. Hopper**—Only 27 in. high; wagon slips over the top. (Blower also can be set in a trench and slanting wagon runway provided for easy unloading. Farmers are reporting success with high sideboard box wagons, side door wagons and automatic unloaders.)

**Case and Frame All Steel Arc-Welded**—Two men can pick up complete machine!

**Fafnir Wide Inner Race, Self-Aligning Ball Bearing Equipped.**

**Power Requirement**—From 3 h.p. for grain to 15 h.p. for forage—depending on material, height and distance.

The New Portable Model C, with tilting hopper, wheels, tires and first joint of pipe, \$370.00

# BEMIS TRANSPLANTER

## TWO ROW TRANSPLANTER

### Band Type Fertilizer Attachments For All Bemis Transplanters

Two spouts carry the fertilizer into the furrow openers that place it in the ground in bands about three inches on each side of the row of plants. The depth of the furrow openers can be adjusted to suit various crops, and different soil conditions. The furrow openers raise and lower with the regular lift lever—No extra levers.

### Proper Amount of Fertilizer

The sprocket supplied with the transplanter for regulating each valve. This amount can be varied from 150 to 1,000 pounds or more per acre. Where a very light application is desired, one of the valves can be completely closed, applying the fer-

tilizer on one side of the row only. Where a very heavy application is wanted, the regular sprocket on the fertilizer attachment can be replaced with a smaller one which revolves the feed star faster.

The sprocket supplied with the transplanter for regulating the distance between the plants are interchangeable with the sprocket on the fertilizer attachment.

A hand lever, conveniently located for operation by one of the droppers, permits starting and stopping the attachment as desired. The hopper, is ample size, holding more than a hundred-pound bag of fertilizer.

Band Type Fertilizer Attachment for Single Row Transplanter with two spouts and furrow openers.....\$49.50

Set Band Type Fertilizer Attachments for Two Row Transplanters with two attachments with extension drive shaft .....\$98.00

### Save With Two Row

The two row transplanter not only effects a saving at planting time, but makes it possible to cultivate the crop with the two row tractor cultivator; so the two row makes a saving in labor during the entire season.

### Strong Construction

The main frame of the two row is very strong and rigid. The main axle bar is welded into a single assembly giving great strength without undue weight.

The 36" steel wheels are very strong and have a heavy concave tire 8" wide.

The Madison Two Row Transplanter embodies all of the exclusive features that have combined to make the BEMIS Horse-Drawn Transplanter the leader for more than 50 years.

It sets rows 39" and 42" apart.

### Floating Shoe

Only BEMIS transplanters have the full floating shoe. The most essential part of a transplanter is the shoe assembly. On the BEMIS, the entire shoe assembly can be set so it is free to float when the runner is in the ground. The droppers furnish the necessary pressure to keep the runner in the ground and firm the soil about the plants by means of the pressure yoke. This pressure can be adjusted for different weight droppers or different soil conditions by moving the loops attached to the seat bars in different notches in the pressure yoke.

### No Missing Plants

The Floating Shoe permits the runner to follow the contour of the ground. There are no missing plants in planting across a dead furrow or depression. Every plant is set at a uniform depth; all evenly packed.

The depth lever can be locked at any depth desired.

All Prices FOB Baltimore  
Subject To Change

BEMIS TRANSPLANTER

The loss of plants set with a Bemis rarely exceeds 1% compared with a loss of 10 to 40% in plants set by hand. It is not necessary to wait for rain when a Bemis is used. The plants can be set when they are the right size; they start growing quickly; mature early and evenly.

Any Spacing Desired

The plants are evenly spaced, at the exact distance apart that is desired. This insures the maximum number of plants per acre. The distance between the plants in the row can be varied from 11" to 77" apart by using the different sprockets furnished as regular equipment.

THE IMPROVED TIGER TRANSPLANTER

The Tiger Transplanter is adaptable to all conditions of planting and spacing; adjustable to all conditions of soil and ground—on hillside or level, will space plants from 14 to 64 inches apart, and operates as readily with either horse or tractor power.

Driver and two planters can set five acres a day without undue strain or hurry. Here is a definite, money-saving implement that will handsomely repay every owner.

Almost human in its operation here is one of the greatest boons to transplanting ever developed. Eliminates packing around the plant; eliminates pouring water on the surface to bake and crack the earth around the plant.

# LAWN SEED

## RICHGREEN LAWN GRASS SEED

Yearly comparative trials have proved this strain to be unsurpassed for first-class, permanent lawns. Only the finest varieties of suitable grasses are used and the seed is re-cleaned until it is free from chaff and weed seeds.

This seed will produce a green, smooth, deep-rooted, velvety sod with a thick bottom, free from the common grasses which produce clumps and knots on the lawn. It is used extensively on the finest estates to produce those exquisitely smooth, rich green sweeps of lawn which are so much admired. **Lb. 65c; 3 lbs. \$1.85; 5 lbs. \$3.00; 10 lbs. \$5.90; 20 lbs. \$11.50; 100 lbs. \$56.00.**

## SUPERFINE LAWN SEED

This is a correct combination of triple refined imported and domestic grasses, including a liberal proportion of Bent Grass, producing a rich green turf. **Superfine** is undoubtedly the finest Lawn Seed available in this country or abroad. ## SHADY PLACE LAWN GRASS MIXTURE

Will quickly produce an abundant and even growth of beautiful green grass in shade, and as it blends well with our Richgreen Lawn Grass Seed it may be used on those portions of the lawn which are shaded by trees, buildings, etc., thus covering the whole area with a rich green sward. **Lb. 75c; 3 lbs. \$2.20; 5 lbs. \$3.50; 10 lbs. \$6.75; 20 lbs. \$13.00; 100 lbs. \$63.00.**

**LAWN GRASSES** should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.
